

NETPUBLISH

Portfolio's Add-On Module for Sharing Digital Assets on the Web

Need to Share Files with Clients, Partners, or Other Divisions within Your Organization?

When select assets need to be shared outside your organization or distributed among a large group, NetPublish allows branded web portals to be easily created without any HTML or CSS skills. These self-service sites allow users to find and download what they need, when they need it, from any device.

Quickly Publish, Dynamically Update

You don't need to know HTML, CSS, or any other web technology for that matter. Simply select the assets you need to distribute and instantly create an online portal with a single click. Assets can be dynamically updated, ensuring everyone has the most recent files when they need them.

Immediate Access

Don't get bogged down fulfilling ad hoc asset requests for everyone in your organization. NetPublish capitalizes on valuable metadata, such as keywords, to allow site visitors to locate the right asset quickly using Google-like, predictive searching. Custom search fields also help tailor the solution to the needs of your business.

Key Features

Unlimited Number of Sites and Users

NetPublish allows you to share without limits. Create an unlimited number of unique sites to distribute any number of assets to an unlimited group of visitors.

Selective Sharing

If you have sensitive documents, files that need approval, or assets that aren't ready for public consumption, NetPublish gives you a flexible way to control access using password-protected sites. If you forget to add someone, you can allow visitors to request access directly from the site.

Automatic Expiration

Whether you are creating a light box for previewing a series of images, or distributing a collection of approved documents, chances are those assets have a desired lifespan. With NetPublish, set site expiration dates so portals automatically retire and go offline when necessary.

On Demand Asset Conversion

Like other assets in Portfolio, only store full-size files and generate variants as needed. NetPublish delivers the right resolution, size and file type for images and videos upon request.

Fully Customizable

Each NetPublish site can be styled to reflect the unique brand of your organization – or your clients' businesses. Choose a header graphic, logo, favicon, and customize site colors to tailor the experience for each portal.

Usage Reporting

Gain fresh insight on asset utilization with built-in reporting. By understanding which files are most frequently downloaded and who is downloading them, you can focus your creative team's valuable time where it matters most. Reports can also be exported, making it easy to share metrics with others.

On Demand Watermarking*

NetPublish helps safeguard your intellectual and creative property with built-in watermarking. Automatically added on-the-fly, custom watermarks can be applied to preview images and full-resolution, downloadable assets. *Requires Portfolio Media Engine.

Collaboration

It's easier to collaborate when the whole team has visibility to assets within the project. To facilitate a more collaborative workflow, users can send direct feedback anytime via the portal. Additionally, if individual assets need to be shared further, a direct link can easily be forwarded.
